## Rumble on the Strand

When you think about tropical jungles and erupting volcanoes South Carolina normally doesn't come to mind, until now.

We have completed our effects installation at Molten Mountain Miniature Golf in North Myrtle Beach, South Carolina. This is our fourth collaboration with Paradise Entertainment and Marks Construction of SC.

Molten Mountain consists of two 18 hole courses. One occupies 16,000 sqft of the volcano interior while the second course wraps around the base of the mountain.

The interior has running lava, steam fissures and geysers. Don't be surprised to hear Lava Louie giving you tips and commenting on your play. The exterior course crosses several pools including the main lava pool at the front of the mountain with its 45 foot waterfall.

The main event is the eruption of the volcano. The volcano smokes, the falls turn to lava and fire explodes from the top of the mountain.

E2 provided a complete show system for the facility including:

- Show Control
- Background Music System
- Show Audio System
- Lighting Effects
- 800 nozzles of water fog effects
- Custom Shows and Character Voices
- 30ft Fireball System

All E2 systems are designed for long life and low maintenance cost. While much of the effects hardware is custom designed and fabricated in house, we also use equipment from many well know names including: JBL, Crown, BSS, Alcorn-McBride, IDEC, Leprecon and Honeywell.
